

You can easily automate Ideogram using the [batch generation](#) feature.

### Batch Generation

Save time and create images in bulk with Batch Generation. Simply upload a spreadsheet with your prompts and come back to finished images. [Learn more](#)

Download template

Upload spreadsheet

Simple template (.csv)

Full template (.csv)

File name	Submitted			Status	
Batch 8.csv	9:13 AM	<div></div>	100%	Done	↓
Batch 7.csv	9:12 AM	<div></div>	100%	Done	↓

All you need to do is fill out their template sheet with your prompts and settings - and Ideogram will generate all the images for you automatically, without having to enter each prompt one by one.

	A	B	C	D	E	F	G	H	I	J	K	
	prompt	visibility	aspect_ratio	magic_prompt	model	seed_number	rendering	negative_prompt	style	color_palette	num_images	
	A clean, minimal private	16.9	off	2.0			default		design			1
	A watercolor illus private	16.9	off	2.0			default		design			2
	A bright and refr private	16.9	off	2.0			default		general			3
	A sleek, modern private	16.9	on	2.0	238171730		default		design	#ffffff #ff8b2b #8b4513		4
	A humorous, car private	16.9	on	2.0			default		design			1
	Happy active sei private	16.9	on	2.0			default		auto			3

It's super convenient, and we actually prefer this over using an additional external automation (which we've also built and tested before). This is simply the easiest way.

The only catch: you'll need the Pro version (\$60/mo). But my recommendation is to get Pro once, generate as many images as you possibly can, and then cancel. That way, you can build up a huge buffer (because you get unlimited *slow credits* that can generate in the background).

You can easily organize everything into your Google Drive folders and prepare content for several months ahead.

Here's the official YouTube video from Ideogram that shows the process:
