

If you want to optimize the quality of your AI images (whether with Midjourney or Ideogram) in the most efficient way, you can enhance your prompts using our AI Image Prompt Generator.

💡 How it works:

Simply upload 3 reference images, and it'll automatically generate optimized prompts for a similar style as your uploaded images.

- Open Pinterest in an incognito tab.
- Enter your keyword for the images you want to generate.

- Download 3 images that rank in the top 10.
- Upload them into the generator.

AI Prompt Generator

Upload Pinterest images and generate Midjourney prompts automatically

Generate Prompts

This is especially useful for images with people or very specific use cases where you need a consistent and refined style.

Every prompt includes “*natural light*” and “*minimalistic background*,” while removing terms like “*outdoor*” and “*urban*.” This makes the images more Pinterest-friendly—no more flashy or futuristic city backgrounds!

If you’re generating a lot of images with people, I recommend using the “selfie format” option. This ensures every prompt is in a “selfie format,” making the images look more natural and less AI-generated.
