

What this version does

This automation:

1. Loops through all boards in your Pinterest account
2. Fetches the latest 250 pins from each board
3. Filters for pins that:
 - Are older than 90 days AND
 - Have fewer than 10 views in the last 90 days
4. And deletes them. Instantly. Mercilessly.
5. Error handling (sleeps for 100s in case Pinterest API is triggered to fast)

How to set up and use this automation?

- Download the following scenario blueprint:

[The Quick Fix – Simple Version \(Limited to 250 pins - board\).blueprint.json\(11.9 KB\)](#)

- Import the scenario to [make.com](#) according to the instructions in chapter "[3. How to Set It Up in make.com](#)".

Pros of this version

- Cleans across all boards
- Quick to set up and run
- Low complexity, high impact

⚠ Limitations

- Can only access the most recent 250 pins per board
- No support for pagination or deep cleanup
- Pins older than 250 in large boards are not handled

Best Use Cases

- Accounts with small to medium-sized boards
- Quick monthly maintenance sweeps
- Users who want results without diving into advanced filters or logic

⚠ Want to change the filter logic?

You can absolutely customize what gets deleted: impressions, clicks, saves, even keywords. But be careful: filters control everything.

👉 Learn how to safely edit them in [Chapter 4: Handle With Care – Advanced Filtering](#)
