

We mostly use Midjourney for plain image pins.

### Pros:

- More affordable (\$10/month for 200 images, \$30/month for unlimited images in relax mode)
- Easy download

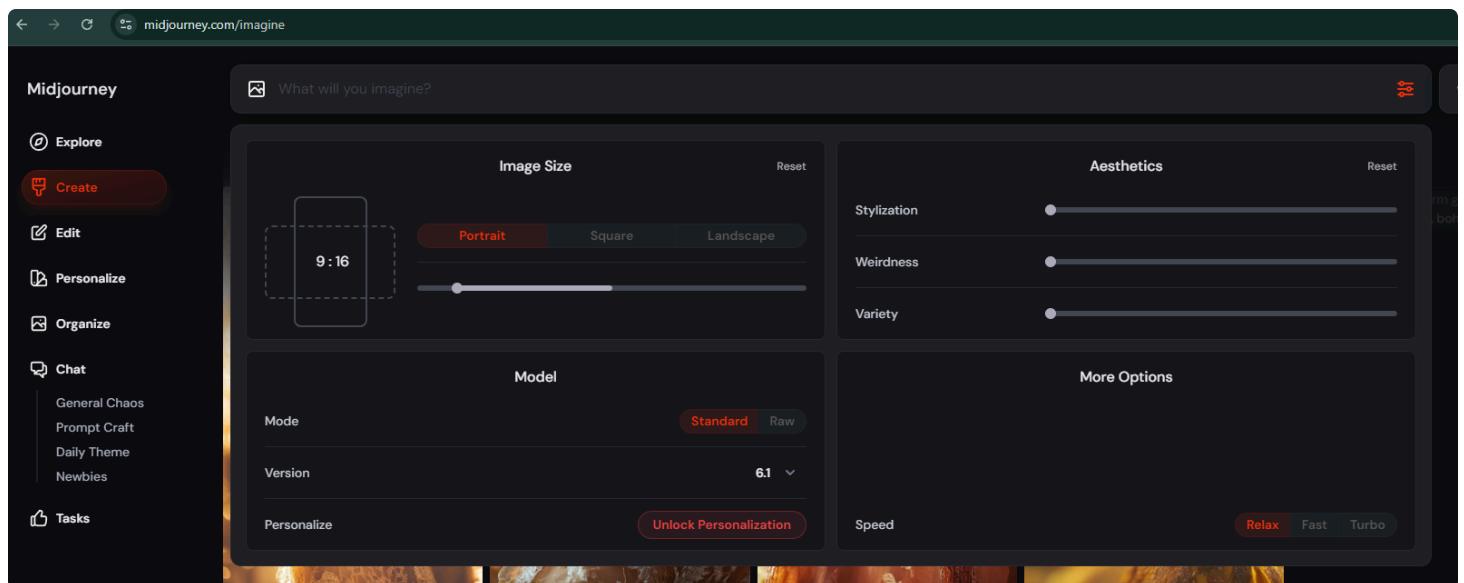

### Cons:

- Sometimes lower quality compared to Ideogram
- Limited or no ability to create text overlays

## Midjourney Settings

The best settings for your project depend on various factors. However, the following settings have proven to work well for creating more photorealistic images:

- Image Size: 9:16
- Model:
  - Mode: Standard
  - Version: usually the latest (v6.1 in the picture)
  - Personalize: Off
- Aesthetics
  - Stylization: 0
  - Weirdness: 0
  - Variety: 0
- You can find more information here: <https://docs.midjourney.com/docs/>

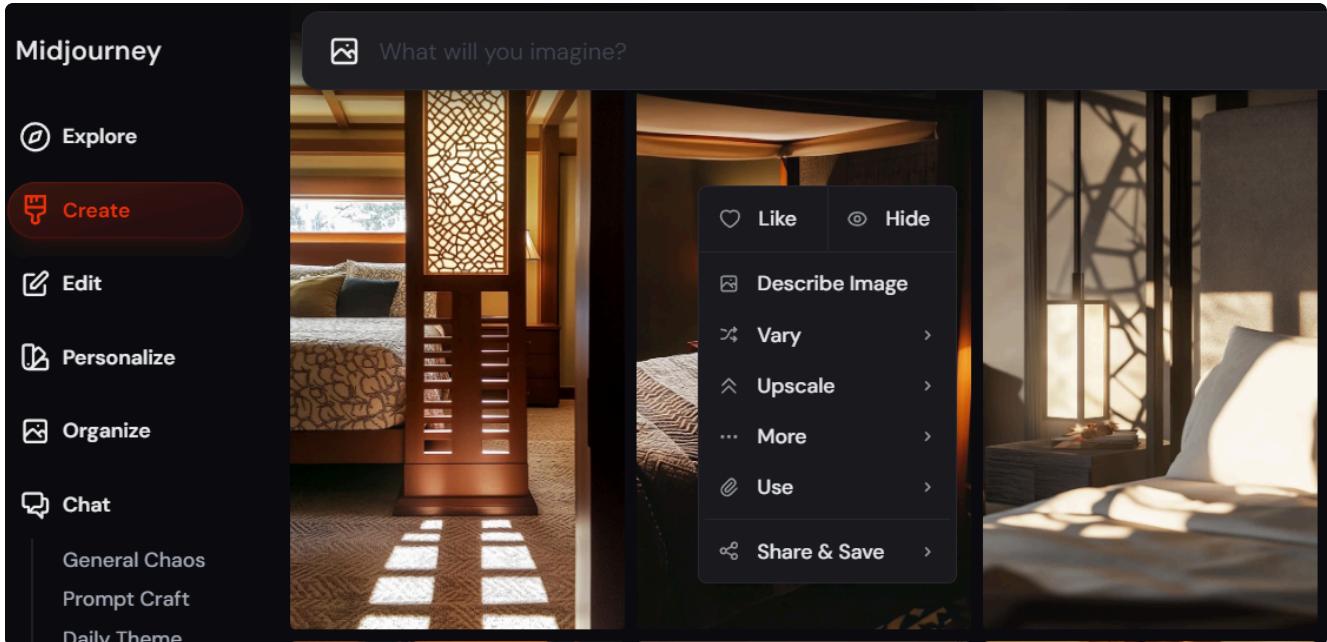

## A Typical Beginner's Midjourney Workflow

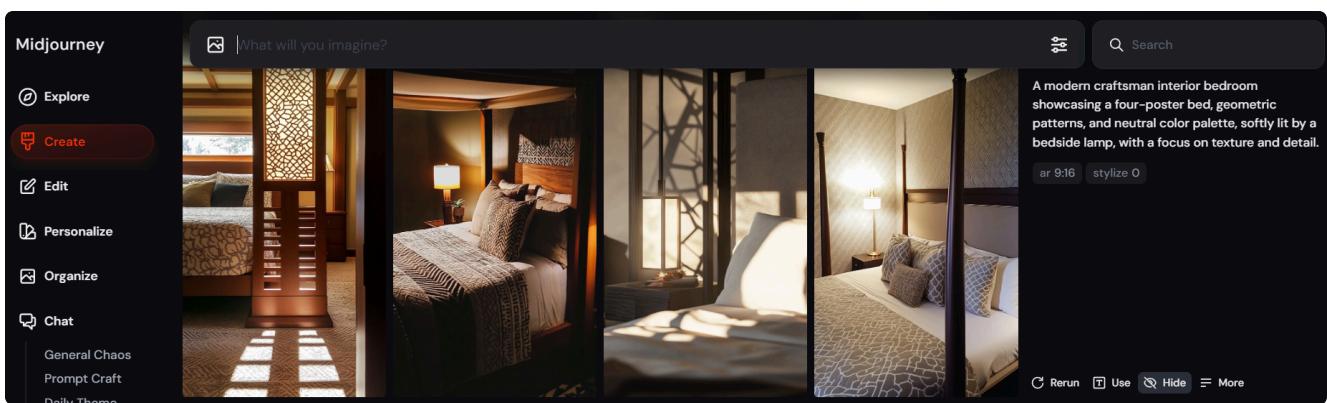

1. Visualize the image you want to create.

2. Open [midjourney.com](https://midjourney.com) and log in
3. Click on "Create" and enter your image prompt in the input field.
4. Midjourney generates four different images based on your prompt.
5. Refine or edit the images in Midjourney (optional).

1. You can hide individual images by right-clicking on them and selecting "Hide."

2. If a set of 4 images doesn't fit your needs, click "Hide" to remove them.

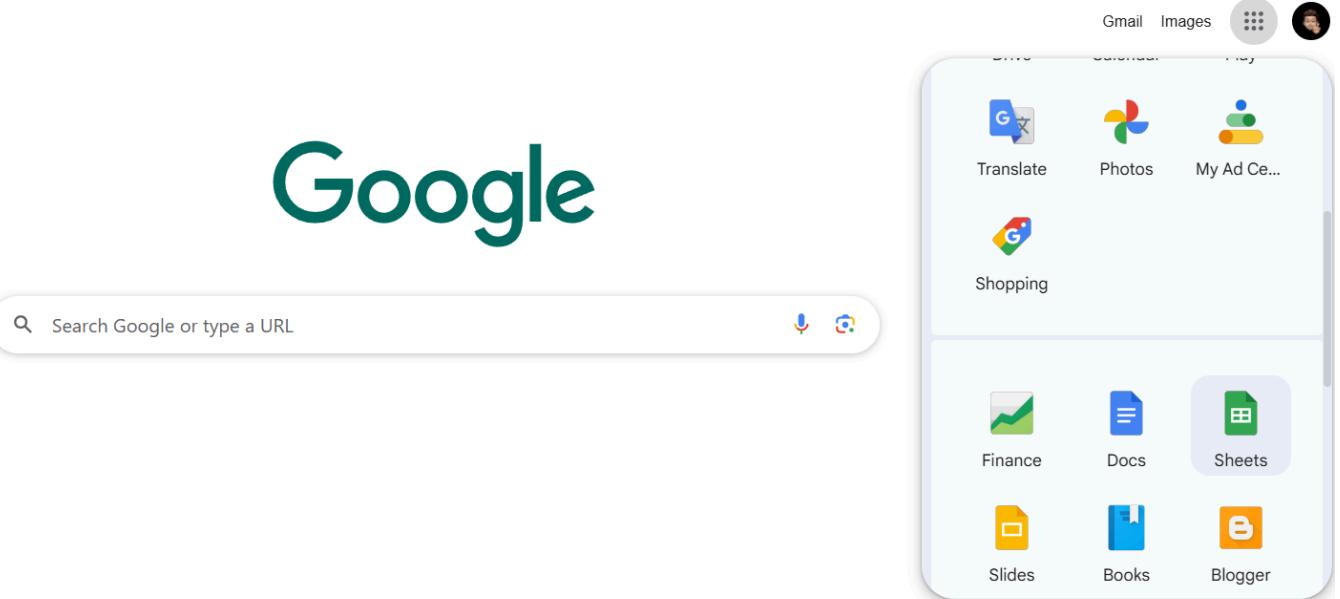

6. Download the images and upload them to Google Drive.

- The best workflow is to use Google Drive for Desktop (you can see our whole Drive process [here](#).)

**To increase the output more, here is a more advanced method:**

1. Create 10 optimized prompts using our [AI Prompt Generator](#). Simply upload 3 top-ranking pins into the tool, and it will generate 10 optimized prompts.
2. Open a existing or new Google Spreadsheet

3. Paste the prompts copied from the AI Image Prompt Generator Tool into a Google Spreadsheet. Rename the sheet for better structure.

A red arrow points to the 'boho decor ideas' text in the bottom right corner of the spreadsheet interface.

4. Generate prompts for as many keywords as possible—this makes the following steps much more efficient!

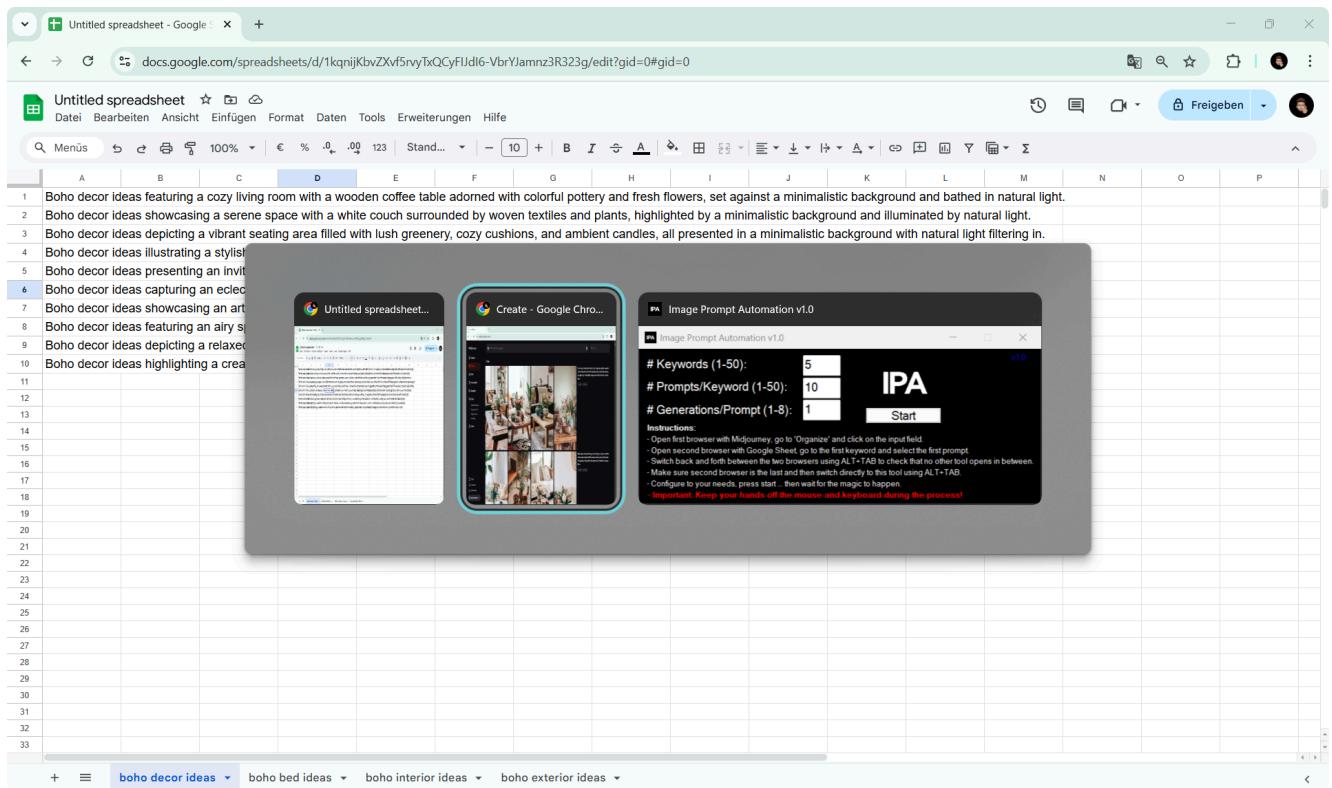

5. Generate images with our Image Prompt Automation

- ⚠️ **IMPORTANT:** I strongly recommend running the automation on a second PC or at a time when you don't need the PC (e.g., before going to sleep). While the automation is running, your PC will be blocked, and you won't be able to use it for other tasks.

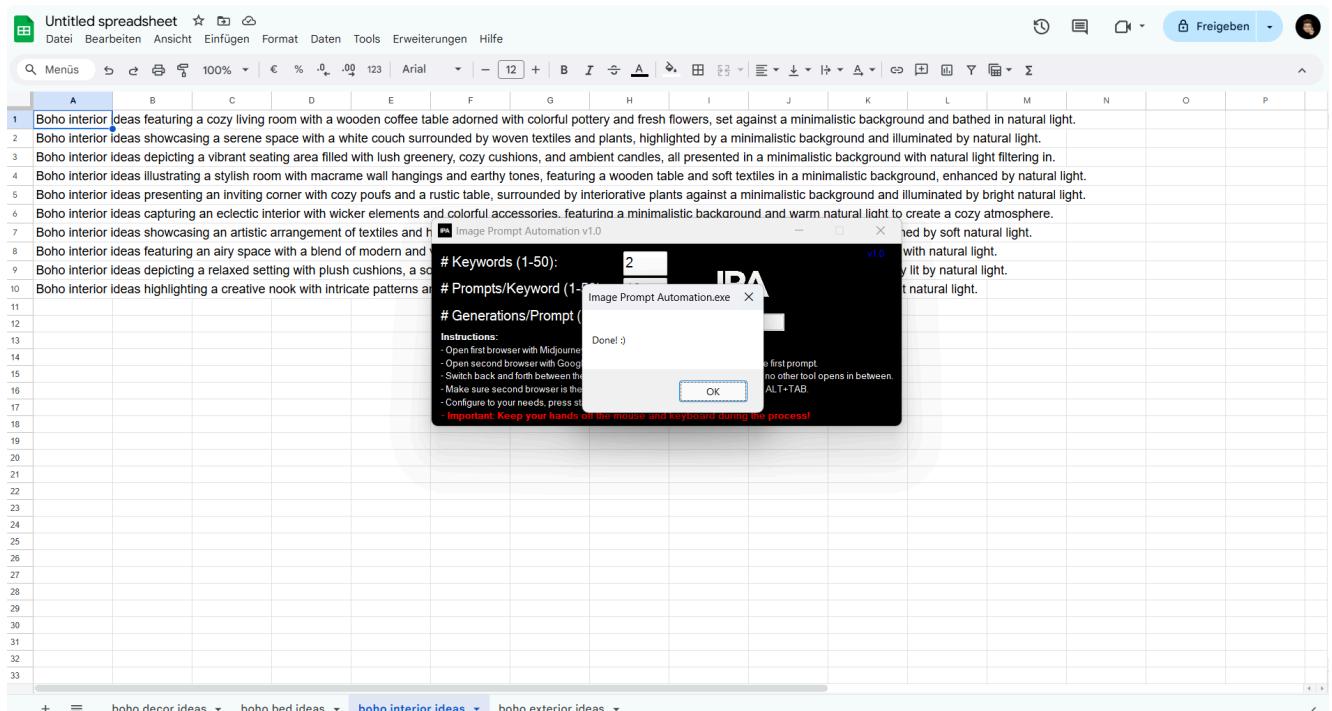

- Open [midjourney.com](#) in a second browser window and go to Create (Tip: You can similarly do this with [ideogram.ai](#), especially for text overlay pins).
- Use Copy our Image Prompt Automation to efficiently copy and process the prompts.

- Download the Image Prompt Automation, start it, and configure it according to your needs:
  - Number of Keywords = Number of tabs in your sheet
  - Prompts per Keyword = How many prompts do you have per keyword (we typically use 10)
  - Generations per Prompt = How many images should be generated per prompt
- Make sure the browser window with Midjourney and the browser window with the Google Spreadsh

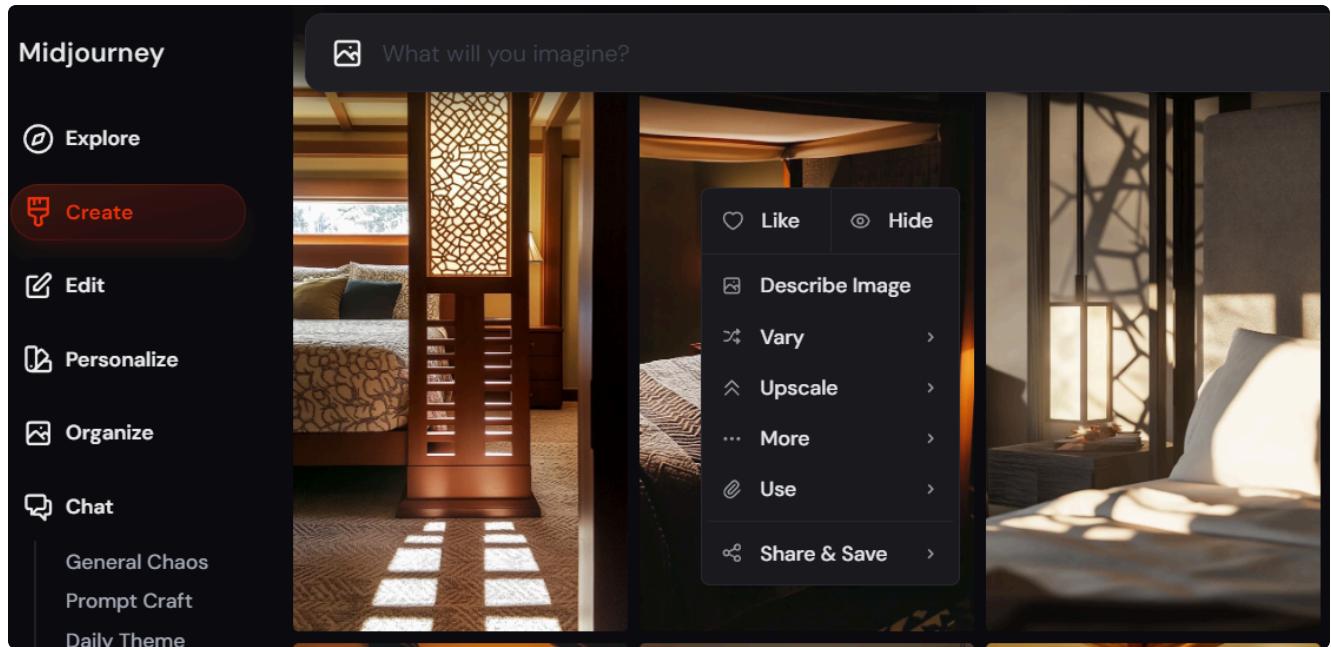

- Then, switch back to the Image Prompt Automation tool and click Start.
- ⚠️ Important:** Don't touch your keyboard or mouse while the tool is running!
- The tool will minimize and automatically copy each prompt from the Google Spreadsheet into Midjourney by simulating keyboard and mouse actions.
- Once the Image Prompt Automation is finished, you'll receive a short message. From this point on, you can use your mouse and keyboard again.

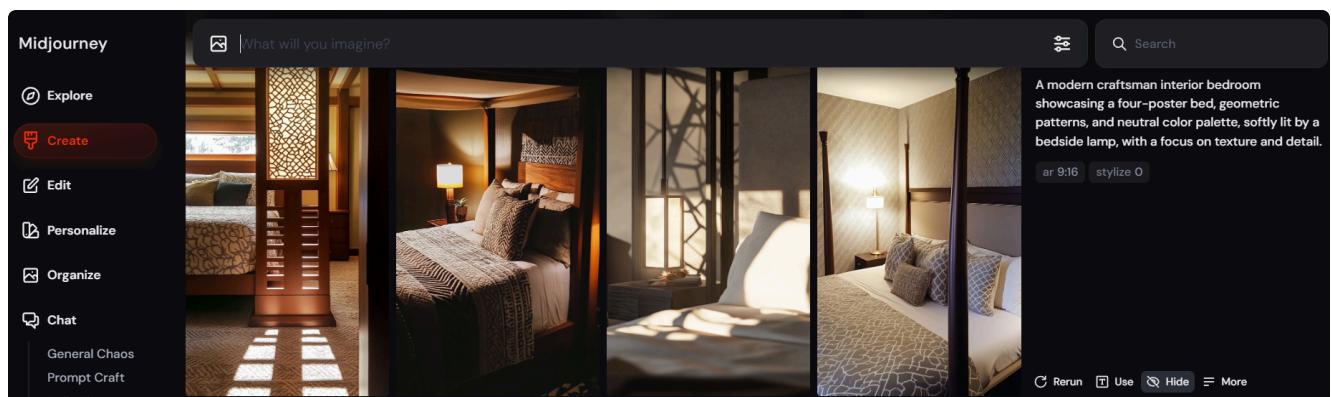

## 6. Refine or edit the images in Midjourney (optional).

- You can hide individual images by right-clicking on them and selecting "Hide."

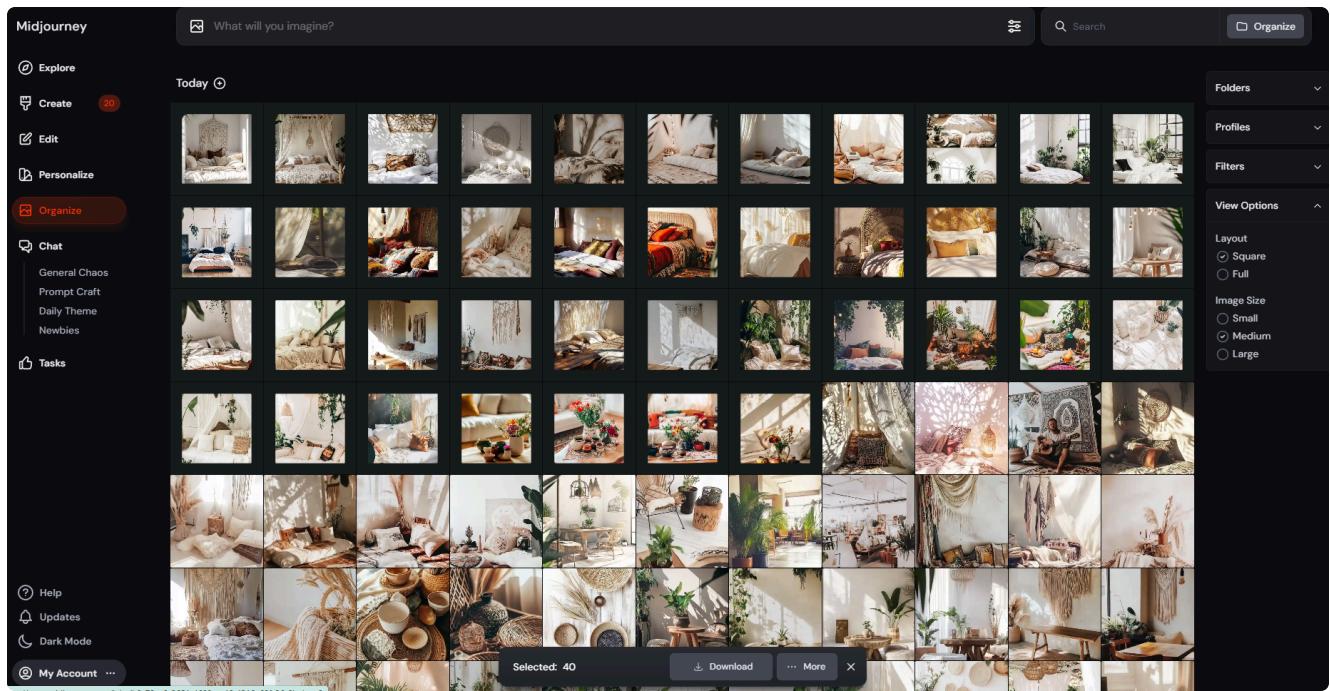

2. If a set of 4 images doesn't fit your needs, click "Hide" to remove them.

7. Download images from Midjourney

- Pro tip: Download the images in groups for each keyword, this makes further processing easier because there is no need to sort them (see step 4).
- Go to "Organize" and scroll to the most recently generated images.
- Select the Images:
  - Hold the left mouse button or press SHIFT while clicking on each image you want to download.
  - To deselect an image, hold SHIFT and click on it again.

- Once you've selected all images, click "Download."
- The images will be packed into ZIP files (50 images per file).

8. Move on to the next keyword and repeat the steps.
