With [XnConvert](#) (a free Bulk Image Converter), you can easily edit images and even automate text overlays.

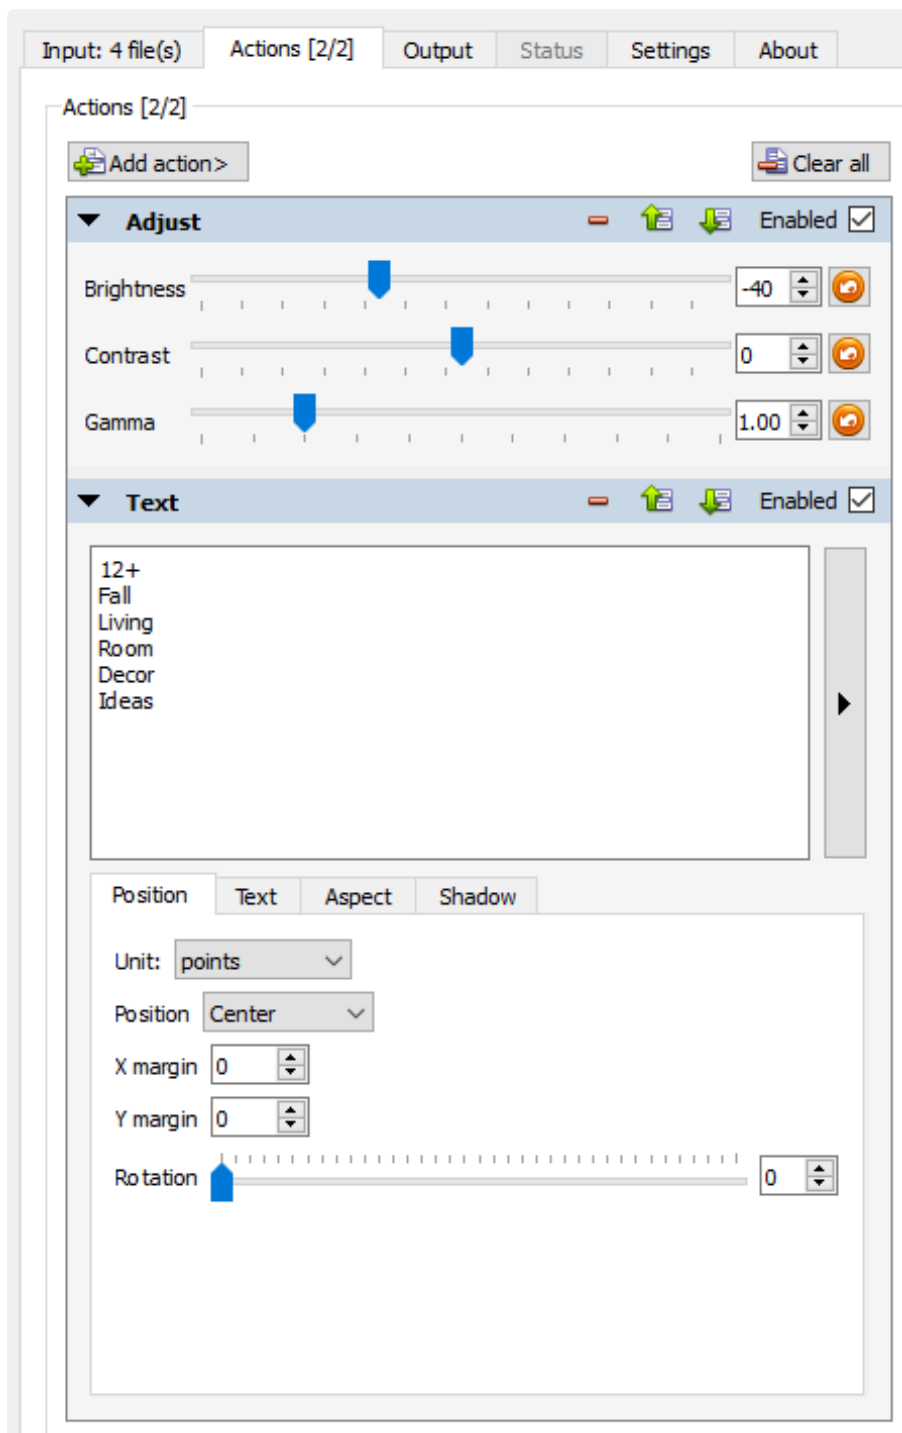

Here's how I like to do it

(PS: I mixed and reworked Pins with Ideogram here - the original Pins weren't mine):

1. Drag your Pins into Input (they'll be processed automatically).

2. Under Actions, edit the Pins however you want (you can change/extend/adjust this as you like).
3. In my example, I set it up like this:

| Input: 4 file(s) | Actions [2/2] | Output | Status | Settings | About |

Actions [2/2]

Add action>   Clear all

▼ **Adjust**   ➖ ⬆ ⬇ Enabled ☑

Brightness   ▬▬▬▬▬◆▬▬▬▬▬   -40 ⬍ 🔄

Contrast   ▬▬▬▬▬▬◆▬▬▬▬   0 ⬍ 🔄

Gamma   ▬▬◆▬▬▬▬▬▬▬   1.00 ⬍ 🔄

▼ **Text**   ➖ ⬆ ⬇ Enabled ☑

```
12+
Fall
Living
Room
Decor
Ideas
```
▶

| Position | Text | Aspect | Shadow |

Unit: points ▾

Position Center ▾

X margin 0 ⬍
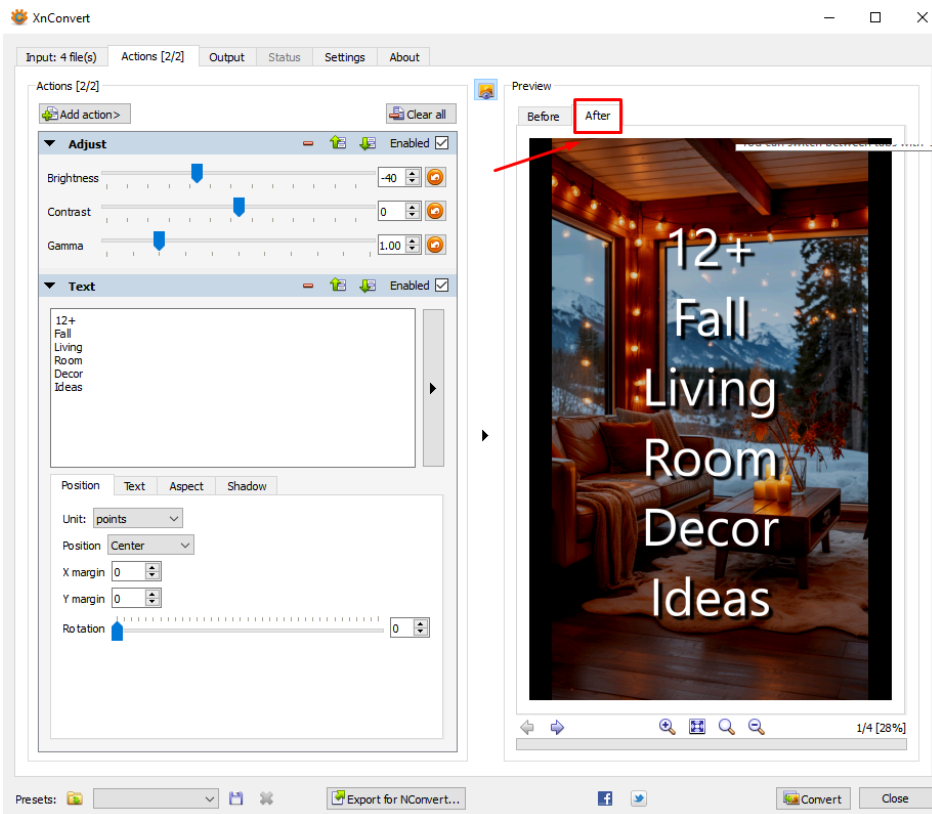

Y margin 0 ⬍

Rotation ◆▬▬▬▬▬▬▬▬▬   0 ⬍

Quick tip → if you want to adjust the brightness, make sure that's the first action in your list.
Otherwise, the text overlay will also be affected by brightness changes - and that's not what you want.

Before:

After:

Of course, you can do tons of different adjustments - your creativity is the only limit here. When you click on 'convert' your provided images will automatically be changed.

These are my general settings (you only need to set them up once and can keep them like this):

| Input: 4 file(s) | Actions [2/2] | Output | Status | Settings | About |

Output

Folder ▾

- ⦿ Source folder
- ○ Folder [   ] ▾ ...

Filename

Filename [{Filename}_ergebnis   ] ▾ ▶

Case [No change ▾]   Start index [1] ▴▾

Format

[Same as original ▾]

Settings...

Options

If an output file already exists [Ask ▾]

- ☐ Keep original file when encoded result is larger (experimental)
- ☐ Keep folder structure
  - ☐ Keep parent folder
- ☐ Keep original date/time attributes
- ☐ Preserve extension
- ☐ Preserve Metadata
- ☐ Preserve color profile
- ☑ Delete original
- ☐ Use multiple CPU Cores   ▬▬▬▭▬▬   1

Multipage

- ☐ Convert multipage file to multipage file (when possible)
- ☐ Convert all pages from multipage file

After conversion

- ☐ Open file explorer
- ☐ Clear the 'Input' file(s)
- ☑ Beep at the end of process
- ☐ Exit after conversion
